ABSTRACT: *The aim of this article is to present to the reader a specific sampling from the French phonological terminology collected from relevant literature with their equivalents in English, German and Turkish. There has been so far many linguistic studies and publications in the French sound system both by French and foreign scholars in form of books, articles and glossaries. French is a member of the larger Romance language family and therefore shares many similarities with other Indo-European languages namely English, German and notably from its sisters such as Spanish and Italian. Therefore the French phonological corpus is composed of mostly cognates of its neighbours, but some are unique to the vernacular. French phonology has been much studied throughout its birth and the relevant literature has been scrutinized and both monolingual, bilingual even multilingual dictionaries have been published to provide such terminologies. A new project titled “Multilingual Dictionary of Phonetics and Phonology” contains a corpus of the most common 10,000 phonological items in English matching their counterparts in 26 world languages among them is French. This article presents only a sampling (letters A, B and C) providing the French corpus with equivalents only in three major languages, i.e. English, German and Turkish. The data coming in for this project in French are not only part of published literature and glossaries but also the result of dedicated efforts on the part of the scholars interested in the Project who have meticulously searched for the best equivalents and in some cases coined unique terms as neologisms. The Project gathers so far the largest French phonological corpus in one collection and some of the items are presented first time in literature first time in literature. The work is aimed to contribute to the ever growing French phonological lexicography with equivalents in such a vast group of language for the benefit of both French and foreign scholars studying this language in comparative methodology.*

Key words: *phonology, phonetics, French, Romance languages, lexicography*

I. GENERAL MAKE-UP OF THE FRENCH PHONOLOGICAL SYSTEM

French is a Romance language spoken in France, Belgium, Switzerland, Canada (principally Quebec), northern New England (especially the state of Vermont), the state of Louisiana and in many other countries and regions formerly or currently governed by France. French is one of the very few languages spoken all over the world, ranked the sixth

most widely spoken language after Mandarin Chinese (over a billion speakers), English, Hindi, Spanish and Arabic. There are currently over 220 million French speakers worldwide, including 72 million so-called partial French speakers. Europe accounts for 39.87% of the French-speaking population, sub-Saharan Africa and the Indian Ocean for 36.03%, North Africa and the Middle East for 15.28%, America and the Caribbean for 7.66% and Asia/Oceania for 1.16% (OIF, 2010). As a result of population growth, the OIF (Organisation Mondiale de la Francophonie) estimates that the number of French speakers will rise to over 700 million by 2050, 80% of whom will be in Africa. This would take the proportion of French speakers in the world population from 3% to 8%. French is unusual in that it often exists alongside other languages in multilingual contexts. In Europe (excluding France), the largest populations of French speakers are essentially to be found in Belgium (45% of the population), Switzerland (20% of the population) and Luxembourg. French is Europe's second most widely spoken mother tongue with over 77 million speakers, after Germany (around 100 million) but ahead of English (around 61 million). Demographers forecast that France's birth rate will make French the most widely spoken mother tongue in Europe, ousting German, by 2025. French is an official language of 29 countries, second only to English in this category. French is one of the fastest growing languages in the world and that nearly half of all French speakers live in Africa (French speaking, 2017).

Before going deeper into the background of the French phonological studies and cite some major resources, let us briefly study the general make-up of the French sound system which makes it different from the rest of the other Romance languages. Unlike English and most of the world languages French enjoys four nasal vowels; final phonemes are not pronounced and word stress falls on the last syllable only. Vowels are not reduced to schwa /ə/ and /ɪ/, and syllables tend to be open (Griffiths, 2014). A brief summary of the major phonological details is presented here in a systematic manner:

VOWELS: French has sixteen vowel sounds: **open a** /a/ (a) *patte, sac, madame, gare; Papa est capable;* **closed a** /ɑ/ (a) *pas, pâte, bas, tas. Ne casse pas les noix;* **nasal a** /ã/ (closed "a" with a tilde) (en, em); *en, pente, banc, lent, temps; Cet enfant apprend lentement.;* **mute e (e muet)** /ə/ (e) *Serez-vous là ?; Vous serez là ? (Vous s'erez là ?) Je ne serai pas là. (Je n' serai pas là.); premier, genou, petit. Le menu de mercredi. Je n(e) le r(e)verrai plus.;* **closed e** /e/ (é) *été, nez, céder. J'ai décidé de parler.;* **open e** /ɛ/ (e) *mer, mère, maire; arrêt, bec, palais, père, tête. Une belle semaine chez la reine.;* **nasal e (the "open e" with a tilde)** /ẽ/ (ein, ien, ain) *bain, bien, rein, rien; J'entre dans la lingerie.;* **regular i** /i/ (i) *mite, ici, lime, bise, site; Voici la liste des victimes.;* **closed o** /o/ (au, eau, ô) *beau, mot, côte. Le veau est trop chaud.;* **open o** /ɔ/ (o) *pomme, octobre, fort. Nicole porte une robe à la mode.;* **nasal o (open o with a tilde)** /õ/ (on) *pont, long, rond. La maison de mon oncle.;* **regular u** /u/ (ou) *cou, moule, douze. Il joue aux boules dans la cour.;* /y/ (u) *lune, pure, buste. Une vue sur la rue.;* **closed "eu"** /ø/ (an o split by a diagonal bar) *feu, deux, jeu, pneu. Les peureux sont malheureux.;* **open eu** /œ/ (oe ligature) *seul, peur, feuille, heure. L'œil de ma sœur. L'œuf et le bœuf;* **nasal /œ̃/ (oe ligature with a tilde)** (un, um) *chacun, brun, lundi. Un parfum pour chacun.* (French Vowels, 2017).

CONSONANTS: There are French consonants 4 of which are almost always pronounced at the end of a word. Out these consonants /p/ *pomme, Pierre,* /t/ and /k/ *crayon, cœur* are NOT aspirated (Lawless French, 2017). Alveolar consonants (/t/, /d/, /s/, /z/, /l/ and /n/)

are generally dental in French /t/ *tiens, tendre*, /d/ *dents, donner*, /s/ *son, sien*, /z/ *zut, zèbre*, /l/ *lèvre, livre* and /n/ *nombre, nier* (ibid). The letter “h” is never pronounced, but one needs to remember to distinguish the “h non-aspiré” from the “h aspiré” (H aspire, 2017). Most words belong to the first group, but for the words that have an “h aspiré”, there are two characteristics that make them different: the definite article does not reduce to “l” (called elision) but remains *le* or *la* and word boundaries are maintained so that sounds do not link (absence of liaison). Some examples for “h non-aspiré” are *l'habitude, l'herbe, l'heure, l'histoire, l'homme, l'honneur, l'huile*, and for those “h aspiré” are *la hache, le hall, le haricot, le hazard, le hibou, le homard, le hockey*. /R/ *ruse, droit, arrêt, partout, mer, rang, gris, courir, merle, pire, rose, trou, pleurer, corde, sourd*; /ʃ/ (ch) *chien, chercher, échauffer*; /k/ *chaos, chrétien, echo, cœur; the graphemes*; “gu” and “qu” can be pronounced three different ways /g/, /gw/, /gʷ/ *jaguar, linguistique* and /k/ likewise /kw/, /kʷ/ respectively (Matzke, 1905). Examples for /g/ are /gw/ and /gʷ/ are *anguille; jaguar; aiguille fatigue; iguane; ambiguïté guérilla; lingual; linguiste distinguer; Guadeloupe*; those for /k/ in form of /kw/ and /kʷ/ are *question; adéquat; quiescent qualité; aquarium; équilateral équivalent; square; ubiquité quartier; équateur; équidistant* (ibid). Even though most final consonants are not pronounced in French, there are a few exceptions, especially with words ending in “-s” (ibid). In words ending in a consonant “+s” or “-es”, the “s” is silent. However, if a word ends in “-as, -ès, -is, -os”, or “-us”, then the “s” is sometimes pronounced (French silent letters, 2017). Examples for the final “s silent” are: *matelas, pancreas, aloes, exprès, logis, clos, confus, dehors*; final “s” pronounced: *cadena; atlas, débarras; accès; palmarès;; oasis; vis dessous; albatross; sinus; ours* (ibid)

LENGTH OF SYLLABLES: In French some vowel-consonant combinations produce a distinctly long sound /:/: the “o” in *rose*; the “a” in *gare*; the “in” in *cinq*; the “an” in *France*; *Onze lampes rouges* (French pronunciation, 2017).

ELISION In French, elision refers to the suppression of a final unstressed vowel (usually [ə]) immediately before another word beginning with a vowel. The term also refers to the orthographic convention by which the deletion of a vowel is reflected in writing, and indicated with an apostrophe (liaison-elision, 2017).

LIAISON (linking) Liaison (French pronunciation: [ljɛ'zɔ̃]) is the pronunciation of a latent word-final consonant immediately before a following vowel sound (Liaison, 2017). Technically, it is a type of external sandhi, which is disrupted in pausa (ibid). In French, most written word-final consonants are no longer pronounced and are known as latent or mute (ibid). For example, the letter s in the word *les*, 'the', which is generally silent (i.e., dead and phonologically null), but it is pronounced /z/ in the combination *les amis* /le.zɑ.mi/, 'the friends'. In certain syntactic environments, liaison is impossible; in others, it is mandatory; in others still, it is possible but not mandatory and its realization is subject to wide stylistic variation. After a singular noun such as “sujet intéressant” no liaison occurs, but after “es” in the second person singular it is used: *Tu portes un livre*. After the word *et*. as in “*Pierre et Alain* [ˌpjerœ a'lɛ̃] (not *Pierre est allé*. [ˌpjerœ tœ tœ a'lɛ̃]) and before an “aspirate h” as in *Les Halles* [le'al] (not [ˌlɛœ zœ al]) there is no liaison (ibid).

WORD STRESS. Although French words are generally thought to be stressed on the last syllable this is scientifically proven to be false (French pronunciation, 2017). The fact of the matter is, voice modulations that could be interpreted as stress are used in French only at

the end of a phrase and are always followed by a pause (ibid). If we say: *Le bébé de ma sœur a eu une mauvaise grippe la semaine dernière.*, the only real stress, within the sentence, will be on *sœur* because there is normally a pause between subject and verb: *le bébé de ma sœur* (ibid). Secondary "stresses" might be felt at the end of *bébé* and *grippe* (ibid). Now the normal way for an English-speaking person would be to say: *Le bé'bé de ma ,sœur → a °eu une mau'vaise ,grippe → la se,maine der'nière.* (ibid). Unlike in English every two or three syllables must be stressed as in ,U -ni-'V E R -SI-TY, in French *L'université de Montréal* has only one stressed syllable, and that is the final syllable: -al in *Montréal* (ibid). In French words, syllables are "stressed" only before a pause (ibid).

INTONATION – Good French pronunciation requires mastery of 3 elements: individual sounds (phonemes), stress placement, and intonation (l'accentuation, 2017). Intonation refers to the varying pitch levels of speech; often referred to as the "melody" of a language, intonation is associated with certain sentence types: declarative, exclamative, imperative, and interrogative (questions) (ibid); *Il fait du soleil. Il y a des nuages.* (falling intonation) Longer declarative sentences often have a rise then a fall: *Je préfère visiter un musée aujourd'hui.* Exclamative intonation is marked by a sharp fall in pitch: *Quel beau chateau!, Quelle belle province!, Quelles vacances formidables!* Imperative intonation is similar to exclamative intonation—that is, a sharp fall at the end: *Levez la main!, Ouvrez le livre!, Tournez à la page soixante-dix-neuf!* Interrogative Intonation or Yes/No questions are signalled by a sharp rise on the final syllable: *Tu aimes la Provence? Vous faites de la voile? Est-ce que vous partez en vacances?* Information questions begin with a high pitch on the question word (où, pourquoi, comment, etc.) and then gradually fall; *Comment vous appelez-vous? Qu'est-ce que vous faites dans la vie?* (ibid).

II. HISTORY OF THE FRENCH PHONOLOGY

French dialects developed from the Vulgar Latin which was brought to Northern Gaul with the Roman conquest in the 1st century B.C. (History of French, 2017). The history of French language is divided into 6 main periods: **1 Gallo-Romance (5th–8th centuries):** The Vulgar Latin in Gaul has developed specific features that made it distinct from the Latin spoken in the other regions of the Roman empire. The Reichenau Glosses are a good example of its phonetics and vocabulary. **2 Old French (9th–13th centuries):** The dialects of Northern Gaul developed into separate language (Langue d'oïl, see below) with a grammar of its own. The first written materials in it date from the Strasbourg Oaths of 842. The Old French literature flourished since the 10th century (chansons de geste etc.). French in this period was already taught in the neighboring countries (especially in Germany). In 11th–13th centuries it was the dominant language of the English administration. It was, also, the language of the crusaders in the Levantine countries. **3 Middle French (14th–15th centuries).** This period was marked by changes both in the pronunciation and in the grammar. A common literary language, based on the dialect of Île de France (the region of Paris), was promoted by the writers. French was replacing Latin in the texts of the public administration in France. **4 Early Modern French (16th century).** The aim of the writers of this period, as in the case of the poets of La Pléiade, was to elevate the French language to the level of Latin as a medium for literary expression, In 1539 a royal decree proclaimed French official language of the public administration. Since that period the government was always involved

in the development and the standardization of the language. **5 Classical Modern French (17th–18th century)**. In this period were fixed the main grammar convention of the modern French. By then it was used as an international language throughout Europe and even in the administrative correspondence of countries as Germany. With the colonial expansion of France French spread to America (Canada, Louisiana, the Caribbean islands etc.). **6 Contemporary Modern French (since 19th century)**. The contemporary pronunciation of the standard language was fixed in that period, namely between 1789 and 1918. French was established as an official language in the French and Belgian colonial possessions in Africa (ibid).

French exhibits the most extensive phonetic changes from Latin of any of the Romance languages. Most other Romance languages are significantly more conservative phonetically, with Spanish and especially Italian. French also shows enormous phonetic changes between the Old French period and the modern language. Spelling, however, has barely changed, which accounts for the wide differences between current spelling and pronunciation. Some of the most important changes have been “the loss of almost all final consonants and the subsequent loss of final /ə/, which caused many newly-final consonants. The loss of the formerly strong stress that had characterized the language throughout much of its history and triggered many of the phonetic changes and significant transformations in the pronunciation of vowels, especially nasal vowels. Only some of those changes have been reflected in the orthography, which generally corresponds to the pronunciation of c. 1100–1200 CE (the Old French period) rather than modern pronunciation (Phonological History, 2017).

A profound change in very late spoken Latin (Vulgar Latin, the forerunner of all the Romance languages) was the restructuring of the vowel system of Classical Latin. Latin had thirteen distinct vowels: ten pure vowels (long and short versions of a, e, i, o, v), and three diphthongs (ae, oe, av). Essentially, the ten pure vowels were reduced to the seven vowels, and vowel length was no longer a distinguishing feature. The diphthongs “ae” and “oe” fell in with and, respectively “av” was retained, but various languages (including Old French) eventually turned it into after the original fell victim to further changes. Vowel length became automatically determined by syllable structure, with stressed open syllables having long vowels and other syllables having short vowels. Furthermore, the stress on accented syllables became more pronounced in Vulgar Latin than in Classical Latin. That tended to cause unaccented syllables to become less distinct, while working further changes on the sounds of the accented syllables. That especially applied to the new long vowels, many of which broke into diphthongs but with different results in each daughter language (ibid).

Old French underwent more thorough alterations of its sound system than did the other Romance languages (ibid). Vowel breaking is observed to some extent in Spanish and Italian: Vulgar Latin “focv(s)” (fire) (in Classical Latin, “hearth”) became Italian “fuoco” and Spanish “fuego” and “feu” in Modern French (Metaphor, 2017). In Old French, it went even further than in any other Romance language; of the seven vowels inherited from Vulgar Latin, only remained unchanged in stressed open syllables:

The standard for French is based on the dialect of Île de France (technically known as Francien) which has been the official standard language since the mid-16th century (Duffell, 2008). Francien has largely replaced other regional dialects of French spoken in northern

and central France; these dialects made up the so-called “Langue d'oïl” (the term is based on the French use of the word “oil”, modern **oui**, for yes). French dialects are classified in 5 groups: 1 **Central**: Francien, Orléanais, Bourbonnais, Champenois; 2 **Northern**: Picard, Northern Norman, Walloon (usually considered a separate language); 3 **Eastern**: Lorrain, Bourguignon (Burgundian), Franc-Comtois; 4 **Western**: Norman, Gallo (around the Celtic Breton area), Angevin, Maine; 6 **Southwestern**: Poitevin, Saintongeais, Angoumois. Regional dialects of French survive for the most part only in uneducated rural speech, although the Picard-Walloon dialect of northern France and the Norman dialect of western France gave strong competition to Francien in medieval times, and Walloon is still spoken in Belgium. The French language of Canada, originally probably of northwestern dialect type, has developed a lot of individual features. There exist also many French-based creoles (in Haiti, USA, the Carribean islands etc.). Standard French has also greatly reduced the use of the Occitan language of southern France (the so-called “Langue d'oc”, from Provençal “oc” for yes). Occitan's major dialect, Provençal, was a widely used medieval literary language (Occitan, 2017).

More than 200 phonetic laws were operational in the transformation of Latin into French (French phonology, 2017). The most essential of them is the suppression of the short vowels before and of all vowels after the stressed vowel; this resulted, at first, in the formation of consonant accumulations that were subsequently simplified and this led to great changes in the sounds of words as compared to their Latin parent forms as well as to cognates in the other Romance languages: L “anima(m)” soul => OF “anme” => ModF “âme”; L “civitâte(m)” city => OF “citez” => ModF “cité” etc. A great part of the other laws are similar to those specific to the Ibero-Romance languages (see Spanish and Portuguese): the voicing of the intervocalic “p, t, c” to “b, d, g”: L “claudere” => F “clore”; the change of the intervocalic “b” to “v”: L “debere” => F “devoir”; the drop of the intervocalic “d, g”: L “cadere” => F “choir”; etc. (ibid). The above laws occur also subsequently: VL “potere” can, may => Gallo-Rom “podeir” (cf. Sp / Port “poder”) => OF “poeir” => F “pouvoir” (with intercalated -v- to avoid hiatus) (ibid). The palatalization of “ca” and “ga” to “cha” and “ja” is peculiar to Francien: L. “campus” => F “champ”. The French pronunciation was deeply influenced by the language of the pre-Roman Celts (amongst them probably the specific pronunciation of *u* as [y]) and of the later Germanic invaders (especially the Franks who gave the modern name of France). The initial Germanic “w-“ was replaced by “g(u)-“ in Francien: Gmc “werra” => F “guerre” (war); Gmc “wardan” => F “garder” (to guard). Modern French has 15 vowels and 20 consonants. The vowels are opened and close (as [e] : [o]), labialized ([œ], [ø], [y]) and nasalized. The sometime great number of diphthongs was largely reduced; the modern language is marked especially by the rising diphthongs “ui” and “oi” (pronounced [wa]) (French diphthongs, 2017). The stress is fixed on the ultimate syllable of the word. The words, being relatively short, are pronounced in groups marked by a common accent (Laits.utexas, 2017). The present day French pronunciation may be characterized as “*modus intensus*” -- the words consists predominantly of open syllables (i.e. ending in vowels), the falling diphthongs are suppressed, the lips are used actively in the articulation of the sounds (Target, 2017).

III. MONOLINGUAL/MULTILINGUAL FRENCH PHONOLOGICAL LEXICOGRAPHY WORKS IN CHRONOLOGICAL ORDER

Throughout the centuries the French linguistical studies have produced their own terminologies mostly cognates along with those of the neighbouring languages, notably English. Such monolingual and multilingual sources have been produced to define relevant items or match them with their equivalents in other languages. One of the largest of such resources is the modern SIL Project titled “French–English Glossary of Linguistic Terminology” which contains currently 7,837 linguistic terms in French and 8,059 terms in English (SIL, 2017). Part of the glossary has definitions in both languages to help the user of the glossary on the one hand to better understand the key concepts of terminology by relating them to their theoretical background, and on the other, to access innovative approaches of the study of language resulting from French linguistics. The project was first launched in 1972 then headed by Thomas Bearth, and is currently being expanded by his followers mainly working on French and English. One third of the corpus deals with the field of phonology and the rest in other fields of linguistics. The French editors of the present “Multilingual Dictionary of Phonetics and Phonology” has benefitted largely from this reference as well as from other resources cited below that have reached to our day from many decades earlier:

IV. THE GENERAL BACKGROUND OF “THE MULTILINGUAL DICTIONARY OF PHONETICS AND PHONOLOGY”

The Linguist List (the Portal of the International Linguistics Community Online operated at Indiana University, Department of Linguistics) made a Call for Editors and Reviewers on July 03, 2017 by Dr Yurtbaşı from Bayburt University, ELT Department, Bayburt, Turkey, for a Project titled “The Multilingual Dictionary of Phonetics and Phonology”. The announcement read “a work in progress that aspires to gather terms in that field from different languages including English, French, Arabic, Turkish, Russian, Chinese, Dutch and more”. The Dictionary was planned to contain more than 10,000 items with their short English and Turkish definitions and examples and that editors/reviewers were needed to work on the relevance of entries and their lexical handling. The contributors

were required to check the equivalents of phonological/phonetic terms in their language or provide more accurate or new ones in their native language and edit the explanations and enrich them with examples. The dictionary was announced to aim to expand the field of Phonetics and Phonology in as many languages as possible in its Multilanguage nature, so linguists from all parts of the world were invited to join in. Within a short deadline of a few months the editor sought assistant editors and proof-readers, eager to contribute to the project with their *linguistical background*.” ([http://linguistlist.org/LL/fyi/fyi-details.cfm?submissionid = 36302018](http://linguistlist.org/LL/fyi/fyi-details.cfm?submissionid=36302018)) The announcement had also a French version which was translated as: “*Le dictionnaire multilingue de phonétique et de phonologie*” est un travail en cours qui aspire à rassembler des termes dans ce domaine à partir de différentes langues, y compris l’anglais, le français, l’arabe, le turc, le russe, le chinois, le néerlandais et plus encore. Le Dictionnaire dispose actuellement de plus de 10 000 mots-clés avec leurs courtes définitions et exemples en anglais et dans ce cadre nous avons besoin d’éditeurs / réviseurs pour travailler sur la pertinence des entrées et leur traitement lexical. Les contributeurs sont tenus de vérifier les équivalences de termes phonologiques / phonétiques dans leur langue ou de fournir des informations plus précises ou nouvelles dans leur langue maternelle, de modifier les explications et de les enrichir d’exemples. Le dictionnaire vise à étendre le domaine de la phonétique et de la phonologie en autant de langues que possible dans sa nature multilingue, de sorte que les linguistes de toutes les régions du monde sont invités à se joindre. Dans le temps limité jusqu’au 15 septembre 2017, l’éditeur cherche des éditeurs-adjoints, et les relecteurs, désireux de contribuer au projet dans leur contexte linguistique. Exigences: – Contexte linguistique-phonologique et engagement à travailler vers la date limite du 15 septembre 2017. Ce travail est une contribution pro bono au monde académique et il peut y avoir place pour un prix financier symbolique. Les candidats sélectionnés seront mentionnés et inclus dans le dictionnaire.” ([https://linguistlist.org /issues/28/28-2892.html](https://linguistlist.org/issues/28/28-2892.html))

The call received huge response from hundreds applicants in all around the world including some French scholars and PhD candidates in linguistics and dozens of other languages. Soon enough a common Google screen and a spread-sheet was arranged by Zouaoui Mehdi, an Algerian born scholar from İstanbul University, one of the French and Arabic editors of the project for the use of all authorized participants to access to the site through a password provided to them allowing them either to enter/upload their contributions or edit the existing materials. The process is currently continuing, and the deadline is being renewed again and again. Among French participants are also a French scholars from French universities as well as professionals from North Africa whose specialties are linguistics. These participants sort out current glossaries which have accumulated monolingual, bilingual and multilingual phonological resources. They also try to find French matches for the existing English corpus within the dictionary pool. They have to create or coin nonbinding French terminology where necessary. Among such French participants Chloé Gfeller’s (Université Paris-Diderot) is much to be praised. The French part of this dictionary is still in need of participants from the *linguistical circles* in that language. The editor is in the belief that through this endeavour participants no not only contribute to the development of phonetic/phonology but also acquire academic prestige and credit for their own own career.

V. EXCERPTS (LETTERS A, B AND C) FROM THE MULTILINGUAL DICTIONARY OF PHONETICS/PHONOLOGY IN FRENCH, ENGLISH AND TURKISH

Within a matter of 6 months the call to the Project has received a tremendous interest for its French terminology, and currently the number of French entries has reached over 6 thousand and ever expanding; this is the largest phonological corpus available in that language with equivalents in English and other major languages. The reader can review a sampling (in unedited form published the first time) from the corpus in the Appendix of this article providing French phonological terminology with their matches only in English, German and Turkish. Volunteers to participate in this project are most welcome to join in to view all corpuses in 26 languages or upload their own contributions by applying to Dr Metin Yurtbaşı with their gmail addresses to access to the online spreadsheet (metinyurtbasi@yahoo.com and metinyurtbasi@bayburt.edu.tr).

VI. CONCLUSION

The French language, currently spoken by more than 200 million people worldwide, mainly in France, Switzerland, Belgium, Quebec and most parts of Africa is one of the major members of the Romance language family bearing the distinct linguistical and more specifically phonological features of the mother family. For more than a century and a half, ever since the days of *Paul Passy*, *Otto Jespersen*, *Henry Sweet*, *Nikolay Sergeevich Trubetzkoy*, *Roman Jakobson*, *Baudouin de Courtenay*, *Ferdinand de Saussure*, *Daniel Jones*, *J.R. Firth*, *Sieb Nooteboom* and *Halle* and *Chomsky* unto our day phonology has grown as an off-shoot of phonetics and linguistics. Current trends in the field such as *linguistic phonetics*, *experimental phonology*, *laboratory phonology* and many more have emerged and every day something new is cropping up. The credit for such developments is due to the initial efforts of the Prague school and the Hague congress in 1928 and the founding fathers of phonology. Innumerable books and articles have been published and thousands of specific terminologies have evolved. Thus the need of dictionaries has to be met by linguistical lexicographers. There have been several attempts recently to produce both monolingual and polylingual glossaries in major languages including English and French. In a bid to bring together as many of the relevant items in the field with their equivalents in major languages of the world, a modern Project has currently been launched in Turkey titled "Multilingual Dictionary of Phonetics and Phonology" (edited by Dr Metin Yurtbaşı from Bayburt University. The French part has been taken up by Chloé Gfeller from Université Paris-Diderot, Department of Linguistics (Phonetics and Phonology) to assist him in its editing and coordination. The Project attempts to provide the largest number of French phonology-related entries with their English and Turkish explanations and equivalents in major languages. This article presents only a portion of the immense corpus in a bid to provide awareness to French linguists of the richness of their scientific terminology and invite more volunteers to participate with their feedback. The project is currently enjoying more than 10,000 French terms in its pool against the same number items in its English corpus. Some of the languages in the project such as German, Russian, Spanish, Chinese, Arabic and Turkish have also reached that number which could very well be of use to scholars and students in their academic pursuits of French sound system and its relevant terminology.

The editor urges volunteers to join in to improve this work by their contributions both in editing the current text and adding new languages (currently 26) and new items in phonetics and phonology.
